

ABSTRACT
NOVEL MYCOBACTERIAL INHIBITORS

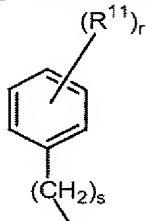

- 5 The present invention relates to novel substituted quinoline derivatives according to the general Formula (Ia) or the general Formula (Ib)

- the pharmaceutically acceptable acid or base addition salts thereof, the quaternary amines thereof, the stereochemically isomeric forms thereof, the tautomeric forms thereof and the *N*-oxide forms thereof. The claimed compounds are useful for the treatment of mycobacterial diseases. In particular, compounds are claimed in which, independently from each other, R^1 is halo; $p=1$; R^2 is optionally substituted alkyloxy,

alkyl, Ar, Het, or a radical of formula ; R^3 is optionally substituted Ar or Het; $q=1$, R^4 and R^5 each independently are alkyl; R^6 is hydrogen or a radical of

- 15 formula ; r is equal to 0 or 1 and R^7 is hydrogen or Ar. Also claimed is a composition comprising a pharmaceutically acceptable carrier and, as active ingredient, a therapeutically effective amount of the claimed compounds, the use of the claimed compounds or compositions for the manufacture of a medicament for the treatment of mycobacterial diseases and a process for preparing the claimed compounds.
